

Task	Details	Description	Related user story	Story points	Dependencies	Successor	Complete (Y/N)?
T1	Create database script to store questions and answer	Create a database with the following tables Question: questionId(primary key), question, answer, courseId Assignment: assignmentId(primary key), related_questionId(foreign key), courseId(foreign key) MC: questionId, choice Course: courseId(primary key) Implement UI framework for MC question and should include: - multiple choices - question description	As Henry, an instructor, I would like to be able to create and edit questions, with multiple choice questions and short answer As Henry, an instructor, I would like to be able to create and edit questions, with multiple choice questions and short answer	2	None	T2,T3,T4,T5,T6,T8	
T2	Create Multiple Choice Question UI	Receive question data from the UI then store MC into the database Retrieval of question data from database to send to UI	As Henry, an instructor, I would like to be able to create and edit questions, with multiple choice questions and short answer	3	T1	T6,T16	
T3	Implement Multiple Choice Question Backend	Receive short answer question data from the UI then store question into the database Retrieval of question data from database to send to UI	As Henry, an instructor, I would like to be able to create and edit questions, with multiple choice questions and short answer	3	T1	T6, T27	
T4	Implement Short Answer Question Backend	Implement UI framework for short answer question and should include - text box - question description	As Henry, an instructor, I would like to be able to create and edit questions, with multiple choice questions and short answer	3	T1	T6	
T5	Create Short Answer Question UI	Implement UI framework for all questions that are created - this including all types of questions	As Henry, an instructor, I want to see all available questions and solutions	2	T1	T16	
T6	Create UI to view all created question	Create UI for creating assignment such that user can create an assignment name and select existing questions to create the assignment.	As Henry, an instructor, I would like to create an assignment that has a name and a large set of question by selecting created questions	3	T3,T4	T27	
T7	Implement UI for creating assignment (both MCQ and short answer)	Implement backend for creating assignment such that the assignment created from UI can be stored into the database	As Henry, an instructor, I would like to create an assignment that has a name and a large set of question by selecting created for creating assignment such that user can create an assignment name and select existing questions to create the assignment	4	T1,T2,T3,T4	T7	
T8	Implement backend for creating assignment	Implement UI framework for all assignments that are created - button to edit existing assignment - button to delete existing assignment	As Henry, an instructor, I would like to create an assignment that has a name and a large set of question by selecting created questions	6	T7		
T9	Add a page to view all created assignments	Create a new page so that user can answer questions on an assignment	As Tyreke, a student, I would like to have access to required assignments to work on and submit them	1	T8		
T10	Implement UI for answering assignment questions	Add a Home Page such that user can go to following pages from the home page: - add assignment page - add question page - view assignment page	As Henry, an instructor, I would like to have a home page after I login so that I can choose what to do, e.g. create assignment/question or view existing resources	6	T3,T4		
T11	Add a Home Page	Add a page such that instructor can see the question and solution he/she created	As Henry, an instructor, I want to see all available questions and solutions	4	T5,T7,T9		
T12	Add page to view a created question	Add a page such that instructor and TA can see a created assignment	As Felix, a TA, I would like to view the assignment before it is accessible to the students	2	T2,T3,T4,T5		
T13	Add page to view a created assignment	Add database function to add and retrieve users and marks	As Henry, an instructor, I would like to create an instructor account and the fields of entry for registration should at least include name, UTmail, program and password.	2	T7,T8,T9		
T14	Update Database for Users	Include implementing backend (storing new account to db) An account must have the attributes: name, UTmail, UTORid, course and password.	As Henry, an instructor, I would like to create an instructor account with full access to the system.	3	T1	T12,T13,T14	
T15	Create an instructor account in the Backend	Include implementing backend(storing new account to db) An account must have the attributes: name, UTmail, UTORid, course and password.	As Shirley, a student, I would like to have a system/UI to create a student account to submit my assignments online. The fields of entry should at least include name, UTmail, student number, program, year, password	2	None		
T16	Create a student account in the Backend	Include implementing backend (storing new account to db) An account must have the attributes: name, UTmail, UTORid, course and password.	As Tina, a TA, I would like to be able to create a TA account and the fields of entry for registration should at least include name, UTmail, program, student number and password	1	None		
T17	Create a TA account in the Backend	Implement instructor account registration UI The fields of entry for registration should include name, UTmail, UTORid, course and password.	As Henry, an instructor, I would like to create an instructor account and the fields of entry for registration should at least include name, UTmail, program and password.	1	None		
T18	Create register page for all three users			3	None		

		Implement account login UI The entry fields for login should include UTmail and password.	As Tina, a TA, I would like to be able to create a TA account and the fields of entry for registration should at least include name, UTmail, program, student number and password	1	None	
T19	Create login page for all three users		As Henry, an instructor, I would like to create an instructor account with full access to the system.			
T20	Update database script for user type	1. Change users.type from varchar to int 2. Add a new table user_type for user type with following columns - typeid int - userName varchar(255) Update the database after user submits an assignment		0.5	T1	
T21	Implement backend for answering assignment questions	Implement UI and backend for an instructor such that he can: - update permission of TA and student account such that: - TA can view assignment before it is accessible to student and mark submitted assignments - Student can access the assignment - update visibility of assignment - update status of assignment such as due date and marks	As Tyreke, a student, I would like to have access to required assignments to work on and submit them As Henry, an instructor, I would like to be able to provide permissions to users, such as TA permissions such that TA can view assignment before it is accessible to student, mark submitted assignments.	3	T9,T10,T11,T17	
T22	Implement instructor permissions	Add visibility of assignment based on the permission	As Felix, a TA, I would like to view the assignment before it is accessible to the students	6	T12,T13,T14	
T23	Make assignment visible to only people with the correct permission	Create function to form randomized sets of questions for each student from a large set of questions for each assignment	As Patricia, an instructor, I would like to be able to quickly form randomized sets of questions for each student from a large set of questions for each assignment	2	T7,T8	
T24	Generate random sets of questions for each assignment	Update Home page such that instructor (and only instructor) can go to - assignment setting page (create assignment and question pages) - TA and student setting page	As Henry, an instructor, I would like to be able to provide permissions to users, such as TA permissions such that TA can view assignment before it is accessible to student, mark submitted assignments	2	T7,T8	
T25	Update Home page for instructor user	Update Home page such that student (and only student) can go to - individual assignment page - all assignment page (can be redirected to answer assignment page)	As Tyreke, a student, I would like to view my assignment marks, and request remarks if necessary	2	T16,T19	
T26	Update Home page for student user	Implement UI and backend so that user can edit an existing question which includes - updating any field on the question			T15,T19	
T27	Edit existing question	Add function to delete question - delete should be called in view question page and edit existing question page - make sure question is deleted from both database and UI	As Henry, an instructor, I would like to be able to create and edit questions, with multiple choice questions and short answer	1	T1,T2,T3,T4,T5	
T28	Delete existing question	Implement UI and backend so that user can edit an existing assignment which includes - update the associated questions - update the name of assignment	As Henry, an instructor, I would like to be able to create and edit questions, with multiple choice questions and short answer	1	T1,T2,T3,T4,T5	
T29	Edit existing assignment	Add function to delete assignment - delete should be called in view assignments page and edit existing assignment page - make sure assignment is deleted from both database and UI	As Henry, an instructor, I would like to be able to create and edit questions, with multiple choice questions and short answer	1	T1,T2,T3,T4,T5	
T30	Delete existing assignment	Update the UI so that the background is not blue or yellow	As Shirley, a student, I would like the User Interface to be accessible to visually impaired, which means the background is not blue or yellow	1	T2,T5,T9,T10, T11	
T31	Update UI for accessibility of the visually impaired	Currently, can only show multiple choice or short answer - not both at once. Need to add radio button functionality to make one visible and the other invisible after respective button selection	As Henry, an instructor, I would like to be able to create and edit questions, with multiple choice questions and short answer	1	T3, T6	Y
T32	Update Add Question Page UI to support both short answer and multiple choice questions	- Add a table to mock database for actual instructors ID (in reality we should be able to access the data from some school database) - Add validator so when user registers with the his utridor check if user's utridor is in the new table - if it's not in table, return an error to the register UI - if it is, then tells UI is good to go so UI can call backend to create new user entry	As Tina, a TA, I would like to be able to create a TA account and the fields of entry for registration should at least include name, UTmail, program, student number and password			
T33	Validate user type on registration			3	T14,T16,T18

	Actual	20.5	20.5	20.5	20.5	15.5	13.5	4.5	1

Kanban Before:

Kanban After:

What we discussed before the sprint (planning):

- Discussed about our tasks during our weekly meeting and assigned story points to the respective team member carrying out the task
- Reviewed our work of the code for the prior week and gave each other feedback

What we did during the sprint:

- Team members carried out their tasks and were properly following what their assignments were
- Any questions on the sprint would be asked on our Slack channel at any time
 - Responses were quite fast

What we can improve for the next sprint:

- As discussed from our last sprint, tasks were mainly done towards the end of the sprint cycle
- Team members were able to start earlier and complete tasks on time
